The Paris Agreement (PA) and Nationally Determined Contributions (NDCs)

The United Nations Framework Convention on Climate Change (UNFCCC) has been the foundational multilateral treaty for cooperation among nations on greenhouse gas (GHG)-induced climate change since its adoption in 1992.[1] The Paris Agreement (PA) is a multilateral treaty in pursuit of the UNFCCC's objective and guided by its principles.[2] Out of 198 Parties to the UNFCCC, 194 are Parties to the PA as of November 9, 2026.[3] The United States is no longer a Party to the PA, as of January 3, 2026.[4] For more information about the United States withdrawal from the PA, see CRS Report R48504, *U.S. Withdrawal from the Paris Agreement: Process and Potential Effects*, by Jonathan D. Haskett.

The PA defines a collective, long-term objective of "holding the increase in the global average temperature to well below 2°C [Celsius] above pre-industrial levels and pursuing efforts to limit the temperature increase to 1.5°C above pre-industrial levels."[5] In pursuit of that objective, the PA requires all parties, regardless of "developed" or "developing" country status, to maintain *nationally determined contributions* (NDCs) that specify by how much a party plans to reduce their GHG emissions, among other things.[6]

NDCs are the primary vehicle through which Parties to the PA communicate their intended contributions to achieving countries' collective temperature and climate goals. NDCs reflect each country's own national climate objectives and plans, including emission reduction goals, adaptation plans, and other elements. Under the terms of the PA, all NDCs must address GHG emissions reductions and all NDCs should list economy-wide absolute GHG emission reduction targets, with flexibility for developing countries to move over time toward such targets.[7] NDCs are updated every five years. Each NDC update is a progression that reflects the "highest possible ambition" in light of each country's particular circumstances.[8]

In advance of the adoption of the PA at COP21 in Paris, Parties were invited to communicate their intended NDC (INDC).[9] Upon a Party's ratification of the PA, the Party's INDC became their First NDC. Thus, each Party has submitted at least one NDC.[10] Thereafter, Parties are required to communicate their NDC every five years. The most recent NDCs were due in 2025 and cover the

period to 2035.[11] Subsequent NDCs are to reflect a progression of contributions to collectively over time increase *ambition*.[12] Article 4 of the PA states that,

> Each Party's successive nationally determined contribution will represent a progression beyond the Party's then current nationally determined contribution and reflect its highest possible ambition, reflecting its common but differentiated responsibilities and respective capabilities, in the light of different national circumstances.[13]

Parties decided that those who submitted their first NDCs without quantifiable 2030 emission targets were required to submit new (Second) NDCs by 2020.[14] Others were asked to submit updated versions of their First NDCs by 2020 that reflect increasing ambition. The majority of countries met this deadline in advance of COP26.[15] According to the UN Climate Change Secretariat (Secretariat), all 194 Parties to the PA have submitted First, updated First, Second, or Third NDCs.[16]

Conditional NDCs

When preparing NDCs, some countries specify conditions which reflect the country's domestic context and capabilities that would allow the implementation of certain measures.[17] Parties to the PA recognized that countries have different capacities to mitigate GHG emissions, by stating that "enhanced support for developing country Parties will allow for higher ambition in their actions."[18] Many countries requesting international support include two sets of targets: targets unconditional on international support, and more ambitious targets conditional on international support (financial, technical, or other support). Some countries combine these targets while others only include conditional GHG mitigation targets, indicating that without international support, goals to reduce GHG emissions will not be met.

Table 1 lists every Party with an NDC target conditional on international support. As of November 9, 2026, 129 of 194 Parties had submitted NDCs conditional on international support. NDC targets are extracted from countries' NDC submissions found in the UNFCCC's NDC Registry.[19] **Table 1** reflects the most recent submissions found in the NDC Registry. Thus, some of the NDC targets are from a Party's first or second NDC and have not been updated by the Party. To provide consistency throughout **Table 1**, the language used to describe the NDC targets may reflect slight modifications to the language used in the NDCs themselves.

Some countries' submissions may include targets for several years. However, in **Table 1**, the Congressional Research Service (CRS) reflects only the target for the period required by the pertinent NDC. For example, a country may include 2030, 2035, and 2050 targets in their 2025 NDC. However, CRS only listed the 2035 target in **Table 1** as that is the period that the 2025

[11] UNFCCC, Paris Agreement, Article 4, para 9; "Nationally Determined Contributions (NDCs): The Paris Agreement and NDCs," UNFCCC, https://unfccc.int/process-and-meetings/the-paris-agreement/nationally-determined-contributions-ndcs.

[12] Article 4 of the Paris Agreement uses the term "ambition" to describe countries' emission reduction and adaptation plans. The use of "ambition" throughout this report reflects this language and does not imply judgment by CRS.

NDCs are to cover. Not all NDC submissions include quantifiable targets, and not all quantifiable targets encompass economy-wide reductions or include all greenhouse gases. Where applicable, the table notes these differences. Additional information on and analysis of NDCs can be found in CRS Report R46945, *Greenhouse Gas Emission Reduction Pledges by Selected Countries: Nationally Determined Contributions and Net-Zero Legislation* and UNFCCC's 2025 NDC Synthesis Report.[20]

Table 1. Conditional Nationally Determined Contributions (NDCs) Submitted to the UNFCCC

Mitigation commitments are extracted from NDC text and expressed as either percent reductions from "business-as-usual" (BAU) as defined by each country, where available, or as GHG emissions estimates expressed in million metric tons (Mt) of carbon dioxide-equivalents (CO_2e), known as $MtCO_2e$, including land use, land-use change, and forestry (LULUCF), unless otherwise noted.

(Current as of November 9, 2026)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Afghanistan[c]	13.6% reduction from BAU (BAU = 48.9) by 2030 (conditional)	No submission as of 11/9/2026
Algeria	7% reduction from BAU by 2030 (unconditional); up to 22% reduction from BAU by 2030 (unconditional + conditional)	14% reduction from BAU by 2035 (unconditional); 31% reduction from BAU by 2035 (unconditional + conditional)
Angola	14% reduction from BAU (BAU = 108 in 2025) by 2025 (unconditional); 24% reduction from BAU by 2025 (unconditional + conditional)	5% reduction from BAU (BAU = 37.49) by 2035 (unconditional); 11% reduction from BAU by 2035 unconditional + conditional)
Antigua and Barbuda	Several sector specific targets, most of which are conditional on international support	No submission as of 11/9/2026
Armenia	NDC submission did not contain a conditional target	44% reduction from 1990 levels by 2035 (unconditional); 52% reduction from 1990 levels by 2035 (unconditional + conditional)
Azerbaijan	40% reduction from 1990 levels by 2050 (conditional)	40% reduction from 1990 levels by 2035 (conditional)
Bahamas (Commonwealth of)	30% reduction from BAU (BAU = 6.347) by 2030 (conditional)	30% reduction from 2010 levels (conditional)
Bangladesh	6.73% reduction from BAU (BAU = 409 in 2030) by 2030 (unconditional); 21.85% reduction from BAU by 2030 (unconditional + conditional)	6.39% reduction from BAU (BAU = 418.40 in 2035) by 2035 (unconditional); 20.31% reduction from BAU by 2035 (unconditional + conditional)
Barbados	35% reduction from BAU (BAU = 1.958) by 2030 (unconditional); 70% reduction from BAU by 2030 (unconditional + conditional)	45% reduction from 2008 levels by 2035 (conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Belarus	35% reduction from 1990 levels by 2030 (unconditional); 40% from 1990 levels by 2030 (unconditional + conditional)	42% reduction from 1990 levels by 2035 (unconditional); 47% reduction from 1990 levels by 2035 (conditional)
Belize	Several sector specific targets, most of which are conditional on international support	Several sector specific targets, all of which are conditional on international support
Benin	20.15% reduction compared to the reference scenario over the period 2021-2030 (unconditional + conditional)	26.5% reduction from BAU (BAU = 201.2) by 2035 (unconditional); 33.8% reduction from BAU by 2035 (unconditional + conditional)
Bhutan	Remain carbon-neutral (conditional)	Remain carbon-neutral (conditional)
Bolivia	NDC submission did not contain a quantifiable mitigation target	Several sector specific targets, some of which are conditional on international support, and some are unconditional. None are quantifiable mitigation targets.
Bosnia and Herzegovina	33.2% reduction from 1990[d] levels by 2030 (unconditional); 36.8% reduction from 1990 levels by 2030 (unconditional + conditional)	No submission as of 11/9/2026
Botswana	15% reduction from 2010 levels by 2030 (conditional)	7.6% reduction from BAU (BAU = 18.23) by 2035 (unconditional); 31.5% reduction from BAU by 2035 (unconditional + conditional)
Brunei Darussalam	NDC submission did not contain a conditional target	20% reduction from BAU (BAU = 30.8 in 2035) by 2035 (conditional)
Burkina Faso	19.6% reduction from BAU (BAU = 107.522) by 2030 (unconditional); 29.42% reduction from BAU by 2030 (unconditional+ conditional)	37.69% reduction from BAU (BAU = 95.430) by 2035 (unconditional); 55.23% reduction from BAU by 2035 (unconditional + conditional)
Burundi	3.04% reduction from BAU (BAU = 9.082 in 2030) by 2030 (unconditional); 13% reduction from BAU by 2030 (conditional)	3% reduction from BAU (BAU = 3.151 in 2035) by 2035 (unconditional): 23% reduction from BAU by 2035 (unconditional + conditional)
Cabo Verde	18% reduction from BAU (BAU = 1.006) by 2030 (unconditional); up to 24% reduction from BAU by 2030 (unconditional + conditional)	18% reduction from BAU (BAU = 1.342) by 2035 (unconditional); up to 39% reduction from BAU by 2035 (unconditional + conditional)
Cambodia	41.7% reduction from BAU (BAU = 155) by 2030 (conditional)	16% reduction from BAU (BAU = 133.7) by 2035 (unconditional); 55% reduction from BAU by 2035 (unconditional + conditional)
Cameroon	12% reduction from 2010 levels by 2030 (unconditional); 35% reduction from 2010 levels by 2030 (unconditional + conditional)	14% reduction from BAU by 2035 (unconditional); 41% reduction from BAU (BAU = 154) by 2035 (unconditional + conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Central African Republic	11.82% reduction from BAU (BAU = 17.644) by 2030 (unconditional); 24.28% reduction from BAU by 2030 (conditional)	7%-14% reduction from BAU (BAU = 5.585) by 2035 (unconditional); up to 17% reduction from BAU by 2035 (unconditional + conditional)
Chad	0.5% reduction from BAU (BAU = 84.96) by 2030 (unconditional); 19.3% reduction from BAU by 2030 (unconditional + conditional)	1.7% reduction from BAU (BAU = 131) by 2035 (unconditional); 21.2% reduction from BAU by 2035 (unconditional + conditional)
Comoros	23% reduction (excluding LULUCF) from BAU (BAU = 1.26) by 2030 (conditional); 47% increase in net CO_2 sink by 2030 (conditional); 5% of the costs of these targets will be met through unconditional measures	14% reduction (excluding LULUCF) from BAU by 2035 (unconditional); 57% reduction (excluding LULUCF) from BAU (BAU = 0.475-0.587) by 2035 (unconditional + conditional); increase net sequestration capacity of forests to -1.437 $MtCO_2e$ from BAU (BAU = -1.260) by 2035
Congo (Republic of)	21.46% reduction from BAU (BAU = 15.279) by 2030 (unconditional); 53.65% reduction from BAU by 2030 (unconditional + conditional)	22.02% reduction from BAU (BAU = 17.973) by 2035 (unconditional); 47.82% reduction from BAU by 2035 (unconditional + conditional)
Cook Islands[e]	38% reduction in electricity generation emissions from 2006 levels by 2030 (unconditional); 81% electricity generation emissions reduction from 2006 levels by 2030 (unconditional + conditional)	No submission as of 11/9/2026
Costa Rica	NDC submission did not contain a conditional target	15% reduction from 2015 levels by 2035 (unconditional + conditional)
Côte d'Ivoire	30.41% reduction from BAU (BAU = 121.44) by 2030 (unconditional); 98.95% reduction from BAU by 2030 (unconditional + conditional)	33.07% reduction from BAU (BAU = 61.192) by 2035 (unconditional); 74.29% reduction from BAU by 2035 (unconditional + conditional)
Cuba	Several sector specific targets, some of which are conditional on international support, and some are unconditional. In total, these targets would reduce Cuba's emissions by 221 $MtCO_2e$.	Several sector specific targets, some of which are conditional on international support, and some are unconditional. In total, these targets would reduce Cuba's emissions by 6.05 $MtCO_2e$.
Democratic People's Republic of Korea	16.4% reduction from BAU (BAU = 218) by 2030 (unconditional); 52% reduction by 2030 (unconditional + conditional)	No submission as of 11/9/2026
Democratic Republic of Congo	2% reduction from BAU by 2030 (unconditional); 21% reduction from BAU by 2030 (unconditional + conditional)	No submission as of 11/9/2026
Djibouti	40% reduction by 2030 (unconditional); 60% reduction by 2030 (unconditional + conditional)	41.3% reduction from 2000 levels (unconditional); 65% reduction from 2000 levels by 2030 (unconditional + conditional)
Dominica (Commonwealth of)	45% reduction from 2014 levels by 2030 (conditional)	No submission as of 11/9/2026

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Dominican Republic	7% reduction from BAU (BAU = 51) by 2030 (unconditional); 27% reduction from BAU by 2030 (unconditional + conditional)	8.5% reduction from BAU (BAU = 57.292) by 2035 (unconditional); 32% reduction from BAU by 2035 (unconditional + conditional)
Ecuador	9% reduction from BAU (BAU = 76.904) by 2025 (unconditional); 20.9% reduction from BAU by 2025 (unconditional + conditional)	7% reduction from BAU (BAU = 130) by 2035 (unconditional); 15% reduction from BAU by 2035 (unconditional + conditional)
Egypt	Reduction of electricity emissions by 37%; oil and gas emissions by 65%; and transport emissions by 7% from BAU by 2030 (conditional)	Reduce electricity emissions by 94.711 from BAU (BAU = 249.24) by 2035; reduce oil and gas emission by 2.050 from BAU (BAU = 2.74) by 2035; reduce transport emissions by 13.302 from BAU (BAU = 170.39) by 2035 (conditional)
El Salvador	Reduction of energy sector emissions by 0.640 $MtCO_2e$ from BAU (BAU = 2019 levels) by 2030 (unconditional); 0.819 $MtCO_2e$ from BAU by 2030 (unconditional + conditional)	5% reduction from BAU (BAU = 21.096) by 2035 (unconditional); 15% reduction from BAU by 2035 (unconditional + conditional)
Equatorial Guinea	35% reduction from 2019 levels by 2030 and 50% reduction from 2019 levels by 2050 (conditional)	37% reduction from 2022 levels by 2035 (unconditional + conditional)
Eritrea	Reduction of fossil fuel emissions by 12% from BAU (BAU = 8.183) by 2030 (unconditional); reduction of fossil fuel emissions by 38.5% from BAU by 2030 (unconditional + conditional)	8.6% reduction from BAU (BAU = 5.023 in 2030) by 2035 (unconditional); 24.4% reduction from BAU by 2035 (unconditional + conditional)
Eswatini	5% reduction from BAU by 2030 (unconditional); 14% reduction from BAU by 2030 (unconditional + conditional); several sector specific targets, all of which are conditional	Reduction of 0.695 $MtCO_2e$ from BAU (BAU = 2.155) by 2035 (unconditional); reduction of 2.24 $MtCO_2e$ from BAU by 2035 (unconditional + conditional)
Ethiopia	14% reduction from BAU (BAU = 403.5 in 2030) by 2030 (unconditional); 68.8% reduction from BAU by 2030 (unconditional + conditional)	40.7% reduction from BAU (BAU = 237.5) by 2035 (unconditional); 70.3% reduction from BAU by 2035 (unconditional + conditional)
Fiji	Reduction of CO_2 emissions from the energy sector by 10% from BAU (BAU = 2.341) by 2030 (unconditional); reduction of CO_2 emissions by 30% from the energy sector from BAU by 2030 (unconditional + conditional)	Reduction of CO_2 emissions from the energy sector by 12% from BAU (BAU = 3.007) by 2035 (unconditional); reduction of CO_2 emissions from the energy sector by 36% (unconditional + conditional); achieve net-zero annual emissions by 2050 (conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Gabon	Remain carbon neutral until 2050 and beyond (unconditional); net carbon absorption of at least 100 million tonnes of CO_2 per year by 2050 (conditional)	Excluding LULUCF, 23.10% reduction from BAU (BAU = 11.565) by 2035 (unconditional) and 40.60% reduction from BAU by 2035 (unconditional + conditional); including LULUCF, 58.7% reduction from BAU (BAU = -58.2) by 2035 (unconditional); up to 108.6% reduction from BAU by 2035 (unconditional + conditional)
Gambia	Reduction of forestry and energy sector emissions by 2.6% from BAU (BAU = 6.617) by 2030 (unconditional); 47.2% reduction of emissions across all sectors from BAU by 2030 (conditional)	7.2% reduction from BAU (BAU = 11.184) by 2035 (unconditional); up to 31.9% reduction from BAU by 2035 (unconditional + conditional)
Georgia	35% reduction from 1990 levels by 2030 (unconditional); 50%-57% reduction from 1990 levels by 2030 (unconditional + conditional)	50% reduction from 1990 levels by 2035 (unconditional); reduction of 26 $MtCO_2e$ by 2035 (conditional)
Ghana	Reduction of 24.6 $MtCO_2e$ total emissions by 2030 (unconditional); reduction 39.4 $MtCO_2e$ total emissions by 2030 (unconditional + conditional)	No submission as of 11/9/2026
Grenada	40% reduction from 2010 levels by 2030 (conditional)	40% reduction from 2010 levels by 2035 (conditional)
Guatemala	11.2% reduction from 2016 levels by 2030 (unconditional); 22.6% reduction from 2016 levels by 2030 (unconditional + conditional)	No submission as of 11/9/2026
Guinea	Excluding LULUCF, 9.7% reduction from BAU (BAU = 23.175) by 2030 (unconditional); 17% reduction from BAU by 2030 (unconditional + conditional); including LULUCF, 20% reduction from BAU by 2030 (unconditional); 49% reduction from BAU by 2030 (unconditional + conditional)	Excluding AFOLU, 9.7% reduction from BAU (BAU = 15.543) by 2035 (unconditional); 20% reduction from BAU by 2035 (unconditional + conditional); including AFOLU, 17% reduction from BAU (BAU = 100.063) by 2035 (unconditional); 49% reduction from BAU by 2035 (unconditional + conditional)
Guinea-Bissau	10% reduction from BAU (BAU = 18.2) by 2030 (unconditional); 30% reduction from BAU by 2030 (unconditional + conditional)	Excluding LULUCF, 40% reduction from BAU (BAU = 4.214) by 2035; including LULUCF, 11% reduction from BAU (BAU = -23.928) by 2035 (conditional)
Guyana	Guyana did not submit a 2020 NDC	Several sector specific targets, some of which are conditional on international support, and some are unconditional. None are quantifiable mitigation targets.

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Haiti	6.32% reduction from BAU (BAU = 18.970) by 2030 (unconditional); 31% reduction from BAU (unconditional + conditional)	No submission as of 11/9/2026
Honduras	16% reduction from BAU (BAU = 50.381) by 2030 (conditional)	17% reduction from BAU (BAU = 50.381) by 2030; 19.6% reduction from BAU by 2035 (unconditional + conditional)
India	Several quantified and unquantified targets. Quantified targets include: 45% reduction in emissions intensity of GDP by 2030; 50% cumulative electric power installed capacity from non-fossil fuel-based energy resources by 2030; create a carbon sink of 2,500 to 3,000 MtCO2e through forest and tree cover by 2030 (conditional).	Several quantified and unquantified targets. Quantified targets include: 47% reduction in emissions intensity of GDP by 2035, from 2005 level; 60% cumulative electric power installed capacity from non-fossil fuel-based energy resources by 2035; create carbon sink of 3,500 to 4,000 $MtCO_2e$ through forest and tree cover by 2035 as compared to the baseline year of 2005 (conditional).
Indonesia	31.89% reduction from BAU (BAU = 2869 in 2030) by 2030 (unconditional); 43.20% reduction from BAU by 2030 (unconditional + conditional)	NDC submission does not have a quantifiable mitigation target
Iraq	1%-2% reduction (unconditional); 15% reduction (conditional)	5% reduction from BAU (BAU = 300) by 2035 (unconditional); 22% reduction from BAU by 2035 (unconditional + conditional)
Jamaica	25.4% reduction from BAU (BAU = 8.2) by 2030 (unconditional); 28.5% reduction from BAU by 2030 (conditional)	Excluding forestry: 25.9% reduction from BAU (BAU = 7.2) by 2035 (unconditional) and 36% reduction from BAU by 2035 (conditional); Including forestry: 33.8% reduction from BAU by 2035 (unconditional); 47.1% reduction from BAU by 2035 (conditional)
Jordan	5% reduction from 2012 levels by 2030 (unconditional); 31% reduction from 2012 levels by 2030 (unconditional + conditional)	5% reduction by 2035 (unconditional); 31% by 2035 (unconditional + conditional); net-zero emissions by 2050 (unconditional)
Kazakhstan	15% reduction from 1990 levels by 2030 (unconditional); 25% reduction from 1990 levels by 2030 (conditional)	17% reduction from 1990 levels by 2035 (unconditional); up to 25% reduction from 1990 levels by 2035 (unconditional + conditional)
Kenya	32% reduction from BAU (BAU =143) by 2030 (21% of the cost of this mitigation effort will be domestic; 79% is conditional on international support)	15 $MtCO_2e$ reduction from 2022 levels by 2035 (unconditional); 75 $MtCO_2e$ reduction from 2022 levels by 2035 (unconditional + conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Kiribati	8% reduction from BAU (BAU = 0.138) by 2030 (unconditional); 23.8% reduction from BAU by 2030 (conditional)	No submission as of 11/9/2026
Kyrgyzstan	15.97% reduction from BAU (BAU = 14.884) by 2030 (unconditional); 36.61% reduction from BAU by 2025 and 43.62% reduction from BAU by 2030 (unconditional + conditional)	16% reduction from BAU (BAU = 23.95) by 2035 (unconditional); 39% reduction from BAU by 2035 (unconditional + conditional)
Lao People's Democratic Republic	60% reduction from BAU (BAU = 82) by 2030 (unconditional); several sector specific targets, all of which are conditional	No submission as of 11/9/2026
Lebanon	20% reduction from BAU (BAU = 38.950) by 2030 (unconditional); 31% reduction from BAU by 2030 (unconditional + conditional); generate 18% of electricity and 11% of building heat from renewable sources in 2030 (unconditional); generate 30% of electricity and 16.5% of building heat from renewable energy in 2030 (conditional)	22% reduction from BAU by 2035 (unconditional); 33% reduction from BAU by 2035 (unconditional + conditional); generate 25% of power from renewable sources by 2035 (unconditional); generate 30% of power from renewable sources by 2035 (unconditional + conditional)
Lesotho	10% reduction from BAU (BAU = 5.713) by 2030 (unconditional); 35% reduction from BAU by 2030 (unconditional + conditional)	6% reduction from BAU (BAU = 7.2 in 2030) by 2030 (unconditional); 24% reduction from BAU by 2030 (unconditional + conditional)
Liberia	10% reduction from BAU (BAU = 12.429) by 2030 (unconditional); 64% reduction from BAU by 2030 (unconditional + conditional)	10% reduction from BAU (BAU = 12.471) by 2035 (unconditional); 64% reduction from BAU by 2035 (unconditional + conditional)
Madagascar	28% reduction from BAU (BAU = 22.578) by 2030; 20% increase in GHG absorption by 2030 (unconditional [3%-4%] + conditional [96%-97%])	16% reduction from BAU (BAU = 39.023) by 2035 (unconditional); 30% reduction from BAU by 2035 (conditional)
Malawi	6% reduction from BAU (BAU = 34.6) by 2040 (unconditional); 51% reduction from BAU by 2040 (unconditional + conditional)	12% reduction from BAU (BAU = 73.4 in 2035) by 2035 (unconditional); 48% reduction from BAU by 2035 (unconditional + conditional)
Malaysia	NDC submission did not contain a conditional target	15-30 $MtCO_2e$ reduction from peak levels by 2035 (unconditional); up to an additional 10 $MtCO_2e$ reduction from peak levels by 2035 (conditional)
Maldives	26% reduction from BAU (BAU = 3.284) by 2030 and net-zero emissions by 2030 (conditional)	25.2% reduction from BAU (BAU = 6.03) by 2035 (conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Mali	Reduction of energy emissions by 31%; agriculture emissions by 25%; LULUCF emissions by 39%; and waste emissions by 31% from BAU by 2030 (conditional)	No submission as of 11/9/2026
Marshall Islands (Republic of)	45% reduction from 2010 levels by 2030 (conditional); net-zero emissions by 2050 (conditional)	58% reduction from 2010 levels by 2035 (conditional); net-zero emissions by 2050 (conditional)
Mauritania	11% reduction from BAU (BAU = 17.968) by 2030 (unconditional); 92% reduction from BAU by 2020 (unconditional + conditional)	8.1% reduction from BAU (BAU = 22.981) by 2035 (unconditional); 75.8% reduction from BAU by 2035 (unconditional + conditional)
Mauritius	40% reduction from BAU (BAU = 6.9) by 2030 (unconditional + conditional)	40% reduction from BAU (BAU = 7.385) by 2035 (conditional)
Mexico	35% of GHG emissions and 51% reduction of black carbon emissions from BAU (BAU = 991 in 2030) by 2030 (unconditional); 40% reduction of GHG from BAU by 2030 including a 70% reduction of black carbon by 2030 (unconditional + conditional)	Achieve net emissions within the range of 363-404 $MtCO_2e$ by 2035 (unconditional); achieve net emissions within 332-363 $MtCO_2e$ by 2035 (conditional)
Micronesia (Federated States of)	Several quantified and unquantified targets. Quantified targets include: 65% reduction of CO_2 emissions from electricity generation from 2000 levels by 2030 and 65% reduction of black carbon and CH_4 emissions from diesel electric generation from 2000 levels by 2030 (conditional).	35% reduction from BAU (BAU = 0.174) by 2035 (conditional)[f]
Moldova (Republic of)	70% reduction from 1990 levels by 2030 (unconditional); up to 88% reduction from 1990 levels by 2030 (unconditional + conditional)	NDC submission did not contain a conditional target
Mongolia	22.7% reduction from BAU (BAU = 74.3) by 2030 (unconditional); 44.9% reduction from BAU by 2030 (unconditional + conditional)	46.3% reduction from BAU (BAU = 81.7) (including LULUCF) by 2035 (unconditional); 52.8% reduction from BAU (including LULUCF) by 2035 (unconditional + conditional)
Morocco	18.3% reduction compared to BAU (BAU = 142 in 2030) by 2030 (unconditional); 45.5% reduction compared to BAU by 2030 (unconditional + conditional)	21.6% reduction from BAU by 2035 (unconditional); 53% reduction from BAU (BAU = 0.076) by 2035 (unconditional + conditional)
Mozambique	40 $MtCO_2e$ reduction between 2020-2025 (conditional)	15%-25% reduction from BAU (BAU = 91.3) by 2035 (conditional)
Myanmar	244.52 $MtCO_2e$ reduction by 2030 (unconditional); 414.75 $MtCO_2e$ reduction by 2030 (unconditional + conditional)	No submission as of 11/9/2026

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Namibia	11.9 $MtCO_2e$ reduction from BAU (BAU = -90.713) by 2030, enhancing Namibia's sink capacity to 102.615 $MtCO_2e$ (conditional)	7.158 $MtCO_2e$ reduction from BAU (BAU = -47.296) by 2035 (unconditional); 15.608 $MtCO_2e$ reduction from BAU by 2035 (unconditional + conditional)
Nepal	Several sector specific targets, all of which are conditional	26.79% reduction from BAU (BAU = 62.056) by 2035 (97% of emissions reductions are conditional on international support)
Nicaragua	8%-10% reduction from BAU (BAU = 77) by 2030 (conditional)	10% reduction in consumption of the fluorinated gases in the Kigali amendment by 2029 (unconditional); increase the share of renewable energy sources in the energy mix to 65% by 2030; 25% reduction of CO_2 emissions from deforestation relative to baseline by 2030 (conditional)
Niger	Reduction of LULUCF emissions by 12.57% from BAU (BAU = 107.296) by 2030; reduction of energy emissions by 10.6% from BAU by 2030 (unconditional); reduction of LULUCF emissions by 22.75% from BAU by 2030; reduction of energy emissions by 45% by 2030 compared to BAU (conditional)	13% reduction from BAU (BAU = 22.278) by 2035 (unconditional); 51.2% reduction from BAU by 2035 (unconditional + conditional)
Nigeria	20% reduction from BAU (BAU = 453) by 2030 (unconditional); 45% reduction from BAU by 2030 (conditional)	32.2% reduction from 2018 levels by 2035 (unconditional [20%] + conditional [80%]); net-zero emissions by 2060 (conditional)
Niue	Increase share of electricity generated from renewable sources to 38% by 2025 (unconditional); increase share of electricity generated from renewable sources to at least 80% by 2025 (conditional)	Several quantified and unquantified targets. Quantified targets include: increase renewable generation to 80% of total electricity generation by 2030 (conditional).
North Macedonia (Republic of)	NDC submission did contain a conditional target	80% reduction from 1992 levels by 2035 (unconditional); up to 82% reduction from 1992 levels by 2035 (unconditional + conditional)
Oman	4% reduction from BAU (BAU = 125.254) by 2030 (unconditional); 7% reduction from BAU by 2035 (unconditional + conditional)	7% reduction from 2024 levels by 2035 (unconditional); 33% reduction from 2024 levels by 2035 (unconditional + conditional)
Pakistan	15% reduction from BAU (BAU = 1,603 in 2030) by 2030 (unconditional); 50% reduction from BAU by 2030 (unconditional + conditional)	17% reduction from 2015 levels by 2035 (unconditional); 50% reduction from 2015 levels by 2035 (unconditional + conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Palau	22% energy sector emissions reduction from 2005 levels by 2025 (conditional)	12%-44% reduction from BAU (BAU = 0.165) by 2035 (conditional)
Panama	Several sector specific targets, all of which are conditional	Excluding LULUCF, 11% reduction from BAU (BAU = 24.859) by 2035 (unconditional); 17% reduction from BAU by 2035 (unconditional + conditional)
Papua New Guinea	Carbon neutrality within the energy sector by 2030; reduction of LULUCF emissions by 25% from 2015 levels by 2030 (conditional)	Net-zero emissions by 2030; net-negative emissions by 2035; 29% reduction from 2022 levels in emissions from the energy sector by 2035; net LULUCF removals by at least 18 $MtCO_2e$ by 2035 (conditional)
Paraguay	10% reduction from BAU by 2030 (unconditional); 20% reduction from BAU (BAU = 0.103) by 2030 (unconditional + conditional)	10% reduction from BAU (BAU = 0.105) by 2035 (unconditional); additional 10% reduction from BAU by 2035 (conditional)
Peru	Not to exceed 208.8 in 2030 (unconditional); not to exceed 179 in 2030 (unconditional + conditional)	Not to exceed 179 by 2035 (conditional)
Philippines	2.71% reduction from BAU (3.3 Gt cumulative emissions) for the period 2020-2030 (unconditional); 75% reduction from BAU (3.3 Gt cumulative emissions) for the period 2020-2030 (unconditional + conditional)	7% reduction from BAU by 2035 (unconditional); 75% reduction from BAU (BAU = 369.75) by 2035 (unconditional + conditional)
Republic of Nauru	Several sector specific targets, some of which are conditional on international support	Several sector specific targets, some of which are conditional on international support
Rwanda	16% reduction from BAU (BAU = 12.1) by 2030 (unconditional); 38% reduction from BAU by 2030 (unconditional + conditional)	7% reduction from BAU (BAU = 27.9) by 2035 (unconditional); 53% from BAU by 2035 (unconditional + conditional)
St. Kitts and Nevis	61% reduction from 2010 levels by 2030 (conditional)	No submission as of 11/9/2026
Saint Lucia	7% energy sector emissions reduction from 2010 levels by 2030 (conditional)	22% energy sector emissions reduction from 2010 levels by 2035 without geothermal (conditional); 32% energy sector emissions reduction from 2010 levels by 2035 with geothermal (conditional)
Saint Vincent and the Grenadines	NDC submission did not contain a conditional target	25% reduction from BAU by 2030 (conditional)
Samoa	26% reduction from 2007 levels by 2030 (conditional)	20.8% reduction from 2020 levels by 2035 (conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
São Tomé and Príncipe	27% reduction from BAU (BAU = 0.4) by 2030 (conditional)	35.4% reduction from BAU (BAU = 0.391) by 2035, excluding LULUCF; regaining and maintaining the status of a net carbon sink by 2030-2035 (conditional)
Senegal	7.03% reduction from BAU (BAU = 37.761) by 2030 (unconditional); 29.53% reduction from BAU by 2030 (conditional)	No submission as of 11/9/2026
Seychelles	73.7% reduction from BAU (BAU = 1.114) by 2030 (conditional)	23.1% reduction from BAU (BAU = 0.883) by 2035 (conditional)
Sierra Leone	10% reduction from BAU by 2030 (unconditional + conditional)	52.5% waste sector emissions reduction from BAU (BAU = 0.837) by 2035; 16.2% transport sector emissions reduction from BAU (BAU = 3.288) by 2035; 41.6% energy sector emissions reduction from BAU (BAU = 1.415) by 2035; 33.6% AFOLU sector emissions reduction from BAU (BAU = 56.864) by 2035 (20% of the cost of these mitigation efforts will be domestic; 80% is conditional on international support)
Solomon Islands	33% reduction from 2015 levels by 2030 (unconditional); 78% reduction from 2015 levels by 2030 (unconditional + conditional); net-zero emissions by 2050 (conditional)	8% reduction from BAU (BAU = 1.206) by 2035 (unconditional); 17%-34% reduction from BAU by 2035 (conditional)
Somalia	30% reduction from BAU (BAU = 107.39) by 2030 (conditional)	5% reduction from BAU (BAU = 84.9) by 2035 (unconditional); 34% reduction from BAU by 2035 (unconditional + conditional)
Sri Lanka	4% reduction from BAU by 2030 (unconditional); 14.5% reduction from BAU by 2030 (unconditional + conditional)	8.11% reduction from BAU (BAU = 577) by 2035 (unconditional); 20.09% reduction from BAU by 2035 (unconditional + conditional); 0.96% increase from BAU (BAU = 8,477) in net carbon removal (unconditional); 4.49% increase from BAU in net carbon removal (unconditional + conditional)
State of Palestine	17.5% reduction from BAU (BAU = 15.93 in "Status-quo Scenario") under "Status-quo Scenario" by 2040 (conditional); 26.6% reduction from BAU (BAU = 22.5 in "Independence Scenario") under "Independence Scenario" by 2040 (conditional)	9% reduction from BAU (BAU = 11.303 in "Status-quo Scenario") under "Status-quo Scenario" by 2035; 7.7% reduction from BAU (BAU = 13.143 in "Independence Scenario") under "Independence Scenario" by 2035 (conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Sudan	38% energy sector emissions reduction from BAU (BAU = 12.458) by 2030; 45% forestry sector emissions reduction from BAU (BAU = 13.384) by 2030; 20% waste sector emissions reduction from BAU (BAU = 1.279) by 2030 (conditional)	No submission as of 11/9/2026
Suriname	Several sector specific targets, several of which are conditional on international support. Taken together, the sectors included in Suriname's NDC account for 70% of Suriname's emissions.	Several sector specific targets, several of which are conditional on international support
Tajikistan	Not to exceed 60%-70% of 1990 emission levels by 2030 (unconditional); not to exceed 50%-60% of 1990 emission levels by 2030 (conditional)	No submission as of 11/9/2026
Thailand	30% reduction from BAU (BAU = 555 in 2030) by 2030 (unconditional); up to a 40% reduction from BAU by 2030 (unconditional + conditional)	47% reduction from 2019 levels by 2035 (conditional)
Tanzania (United Republic of)	30%-35% reduction from BAU (BAU = 219.469) by 2030 (conditional)	No submission as of 11/9/2026
Togo	20.51% reduction from BAU (BAU = 30.410) by 2030 (unconditional); 50.57% reduction from BAU by 2030 (unconditional + conditional)	15.7% reduction from BAU (BAU = 52.7) by 2035; 52.1% reduction from BAU by 2035 (unconditional + conditional)
Tonga	13% energy sector emissions reduction from 2006 levels by 2030 (conditional); other sector-specific targets	Plant one million trees by 2030 (unconditional); reduce energy sector emissions from electricity by 0.025 from 2006 levels by 2035; reduce energy sector emissions from transportation by 0.045 from 2006 levels by 2035; reduce HFC imports by 30% by 2035; reduce the generation and consumption of single-use plastics by 2030 (conditional)
Trinidad and Tobago	30% public transportation sector emissions reduction from 2013 levels by 2030 (unconditional); 45% public transportation sector emissions reduction from 2013 levels by 2030 (unconditional + conditional)	50% reduction in transportation sector emissions compared to 2013 levels by 2035 (unconditional); 30% share of power generation from renewable energy sources by 2030; 15% reduction in cumulative emissions from transportation, power generation, and the industry sector from BAU (BAU = 57.869) by 2035 (conditional)

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Tunisia	27% reduction in carbon intensity from 2010 levels by 2030 (unconditional); 45% reduction in carbon intensity from 2010 levels by 2030 (unconditional + conditional)	31% reduction in carbon intensity from 2010 levels by 2035 (unconditional); 62% reduction in carbon intensity from 2010 levels by 2035 (unconditional + conditional)
Turkmenistan	20% reduction from BAU by 2030 (conditional)	No submission as of 11/9/2026
Tuvalu	Tuvalu's updated NDC includes unconditional, conditional, and aspirational contributions to reduce emissions. Including, 100% power (electricity) sector emissions reduction by 2030; increase energy efficiency in Funafuti by 30%; 60% energy sector emissions reduction from 2010 levels by 2030 (conditionality not specified); zero-carbon development pathway by 2050 (conditional).	Tuvalu's NDC 3.0 includes unconditional, conditional, and aspirational contributions to reduce emissions. The unconditional contribution includes actions that Tuvalu has already undertaken through renewable energy programs to "significantly" reduce its reliance on imported fossil fuels for electricity generation. Targets conditional on international support include 100% power (electricity) sector emissions reduction by 2035; increase energy efficiency in Funafuti by 30%; 60% energy sector emissions reduction from 2010 levels by 2030; zero-carbon development pathway by 2050 (conditional).
Uganda	5.9% reduction from BAU by 2030 (unconditional); 24.7% reduction from BAU (BAU = 148.8) by 2030 (unconditional + conditional)	No submission as of 11/9/2026
Uruguay	Uruguay commits to not exceed 9.267 Gg of CO_2 emissions, 818 Gg of CH_4 emissions, and 32 Gg of N_2O emissions by 2030, and to reduce HFC emissions by 10% relative to baseline consumption[g] (unconditional); Uruguay commits to reducing its emissions by a further 960 Gg of CO_2, 61 Gg of CH_4, and 2 Gg of N_2O, and reducing its HFC emissions by a further 5% (conditional)	Uruguay commits to not exceed 9.267 Gigagrams (Gg) of CO_2 emissions, 818 Gg of CH_4 emissions, and 32 Gg of N_2O emissions by 2035, and to reduce HFC emissions by 30% relative to baseline consumption[g] (unconditional); Uruguay commits to reducing its emissions by a further 960 Gg of CO_2, 61 Gg of CH_4, and 2 Gg of N_2O by 2035, and reducing its HFC emissions by a further 5% relative to BAU (conditional)
Vanuatu	Several energy and waste sector targets, all of which are conditional	1.60857 $MtCO_2e$ reduction from 1994 levels by 2035 (conditional)
Venezuela (Bolivarian Republic of)	20% reduction compared to BAU by 2030 (conditional)	Several sector specific targets, some of which are unconditional and others are conditional
Vietnam	15.8% reduction from BAU (BAU = 928) by 2030 (unconditional); 43.5% reduction from BAU by 2030 (unconditional + conditional)	No submission as of 11/9/2026

Country	2020 NDC Targets[a]	2025 NDC Targets[b]
Zambia	25% reduction from 2010 levels by 2030 (unconditional); 47% reduction from 2010 levels by 2030 (unconditional + conditional)	25% reduction from BAU (BAU = 185.957) by 2030 (unconditional); up to 47% reduction from BAU by 2030 (unconditional + conditional)
Zimbabwe	40% reduction from BAU (BAU = 75.4) by 2030 (conditional)	40% reduction from BAU (BAU = 125.769) by 2035 (conditional)

Source: Compiled by the Congressional Research Service (CRS) using data from the United Nations Framework Convention on Climate Change, (UNFCCC), "Nationally Determined Contributions (NDC) Registry," https://unfccc.int/NDCREG; and World Resources Institute, Climate Watch Data, "NDC Tracker," https://www.climatewatchdata.org/ndc-tracker.

Notes: This table includes emission reduction targets listed in NDCs and does not reflect other elements of NDCs, such as supporting information that may have been updated. See individual NDC documents for a complete description of greenhouse gases (GHGs), sectors, and other data and elements associated with each countries' targets. The level of specificity in the table differs among the countries, based on the information in the sources consulted.

Acronyms used in this table include:

BAU = business-as-usual. Where BAU values are present throughout this table, they represent values in million metric tons (Mt) of carbon dioxide-equivalents (CO_2e), known as $MtCO_2e$, including land use, land-use change, and forestry (LULUCF), unless otherwise noted. These BAU values represent emissions levels in the target year if emissions reductions do not occur. Some countries have negative BAU values because they are carbon sinks.

CO2 = carbon dioxide

AFOLU = agriculture, forestry, and other land use

GDP = gross domestic product

CH_4 = methane

Gt = gigatons

HFC = hydrofluorocarbon

Gg = gigagrams

N_2O = nitrous oxide

a. NDC targets submitted in 2020 are to cover the period up to 2030.

b. NDC targets submitted in 2025 are to cover the period up to 2035, though not all mitigation commitments submitted by Parties cover the period up to 2035.

c. This target is from Afghanistan's first NDC, submitted on November 23, 2016.

d. Bosnia and Herzegovina also provide percent reduction targets from 2014 emissions levels.

e. This target is from Cook Islands' first NDC, submitted on September 1, 2016.

f. The NDC states "these GHG reduction numbers are only for the modelled measures, which are subsets of all NDC measures. Actual GHG reduction with all the measures implemented would be higher."

g. The baseline is established based on average consumption from 2020-2022.
